Lockport, unless otherwise stated, and include duties and other import expenses. Customer pays transportation from Lockport only. All orders will be sent express collect unless other arrangements are made.

536 Willow Street, Lockport, New York, Phone 2038

Cable Address: Barnes, Lockport, N. Y.

Lockport is 18 miles from Niagara Falls on Route 31 and 22 miles from Buffalo on Route 78. We cordially invite our friends and customers to visit us whenever they are in this vicinity as we are enthusiastic gardeners and there is always something of horticultural interest to be seen.

Foreword

We wish first of all to thank very sincerely our many customers for their confidence and patronage last year and for their patience under the abnormal conditions caused by strikes on land and sea. We enjoyed contacts with gardeners from nearly every state and look forward this season with keen anticipation to renewed association with old friends and the making of new.

We find our business most interesting and one in which the whole family likes to take part. We wish you could have seen us last fall when a strike-delayed shipment would finally arrive. We all worked like beavers along with our faithful helpers, even our two young sons doing their best to help. Leo, aged 11, was our mail and errand boy and Michael, aged 8, proved very reliable at counting out bulbs. To let you in on a secret, we jokingly tell them that if we are the "big" Importers, they must be the Little Imps—for short and other reasons left to the imagination.

We feel that our business policy has been understood and appreciated. As many of you know, we try to give each customer personal, individual attention as well as efficient and courteous service. One customer for whom we had secured special information from Holland wrote, "I see that you are people who are not finished with a transaction until the customer is satisfied," and we were happy to see how exactly he had caught the spirit of our business.

As most of you are interested in the good Dutch people, perhaps a report on present conditions in Holland may not be out of place. Although there is still great privation on account of the strict rationing of all foods and the scarcity of clothing there has been some improvement in living conditions. With the emphasis still on exports to build up favorable balance of trade with which to purchase goods necessary to repair their national economy much must be sacrificed to that end. However, we can safely assume that a people of such courage and industry will persevere until they have triumphed over all their difficulties.

Although as we write this the ground is covered with snow, the sun grows brighter and spring seems imminent. We contemplate with you the miracle of the flower bud so tightly hugged in the heart of each bulb until the sun grows strong enough to draw it forth; and we are impatient, as we know you are, to see flower for the first time the many new varieties tucked away last fall. Perhaps, we are in the same class as Omar Khayyam's vintners about whom he wondered what they could buy "one-half so precious as the goods they sell." If any of you should pass this way in April, May or June, won't you please stop and see our garden?

We do so enjoy meeting our customers in person but even by correspondence we feel that we made many new friends last season and hope to make many more this season. One of the most enjoyable features of our business is the interesting, friendly letters you write us about your gardens, and we hope you keep right on with them. We try to answer them all quite promptly but, if during the rush seasons we fall a little behind, we know you will understand.

Good gardening to you all!

An Invitation

Mr. Thomas Hoog, of the Van Tubergen firm, has asked us to convey to all our friends an invitation to visit their flower fields at Haarlem, Holland. A warm welcome awaits those fortunate enough to be able to visit their nursery at the time of its greatest display in April and May next year.

Quality In Bulbs

This is dependent on three principal factors—expert growing to produce sound healthy stock, proper harvesting and curing and careful packing with as little handling as possible. Van Tubergen Bulbs meet the requirements of the most exacting in all respects.

When you are buying just "bulbs," without any knowledge as to the source of supply you may or may not receive good stock. But when you purchase Van Tubergen Bulbs you **know** you will receive bulbs of a definite quality grown by a firm of known integrity, with a reputation as leading bulb specialists for nearly 80 years.

There is a considerable price differential between the cheapest bulbs and the best bulbs. We make no attempt to skimp on the quality of stock or our service to customers in order to quote the lowest prices, feeling that our bulbs are well worth the price asked and that results determine the value. The fact that blooms from our bulbs are consistent prize winners when exhibited by our customers is an indication that they agree with us.

We sincerely appreciate the recommendations of customers and we are always pleased to receive names of friends for our mailing list.

Darwin Tulips

The Darwin Tulips are the best known of the late, long stemmed Tulips now so popular. They are characterized by their particularly long stems, globular flowers and petals of heavy substance. These Tulips are magnificent for large beds or used informally in groups in borders.

They are delightful interplanted in beds with Bleeding Hearts, Lupines, Linums, Alyssum, Iberis, Anchusa, Myosotidiflora and Violas. Shrubs in bloom at the same time include Kerria, Azaleas, Redbud, Rosa Hugonis, Syringa chinensis and Viburnum tomentosum.

A number are also useful for late forcing and the best for this purpose are: Bartigon, City of Haarlem, Frans Hals, Princess Elizabeth, Rose Copeland, William Copeland and William Pitt.

Culture: Tulips are easily grown. Plant from early October until the ground freezes in well-drained soil that is in good tilth. Although the best average depth to plant is 5 inches and 6 inches apart, they may be planted deeper with good results providing the drainage is adequate. Under such conditions it is not necessary to lift them every year but in case this is felt to be desirable for any reason, they may be lifted as soon as the foliage is dry and stored in a cool dry place until the next planting season arrives. Use a well-balanced organic fertilizer over them after planting.

Single Early Tulips

Single Early Tulips usually flower at the end of April and are indispensable for brilliant color in beds and borders in early spring. As they are not as tall as the Darwin, Breeder and Cottage Tulips, they are especially adapted to places exposed to the wind. They may be planted any time from the middle of September until the ground freezes, about 4 inches deep and 4 or 5 inches apart.

Early Tulips are very popular for growing indoors. For best results, the bulbs should be potted immediately on receipt and treated the same way as Hyacinths. Tulip bulbs need at least three months for a good root development before they can stand a forcing temperature.

Those marked * are the earliest flowering varieties and are specially recommended for forcing. They are classified by their blooming periods as E early, M medium, and L late. The figure gives height in inches.

All Bulbs are Extra Size, 12 cms. and over unless otherwise stated.

New Triumph Tulips

A new race of Tulips flowering between the early and late varieties has been evolved by crossing Single Early Tulips with Darwins. The flowers are large and the colors are as fine as those of the Darwins. All varieties are vigorous in growth and the stems are strong. As they flower immediately after the Single Early Tulips, and about ten days in advance of the Darwins, they are especially desirable where the space they occupy is needed for summer bedding material. We also recommend them for growing in pots as the stems are stiff and the flowers last a long time. We offer an unusual number of varieties.

Lily-Flowered Tulips

The Lily-Flowered Tulips are a most distinct and very attractive type. They are distinguished by curved and pointed petals which are gracefully reflexed to give a lily-like form to the flowers. We already grow about 30 distinct varieties of these but stocks of the majority are too small to be offered as yet. However, it is unlikely that any firm offers more varieties than are listed here. It is our aim to have them as an elegant type, of unusually bright colors and with long stems.

Rembrandt Tulips

(May-Flowering)

These "broken" Darwin Tulips are a gay and interesting strain of May-flowering Tulips with flecked, feathered and striped flowers much superior to the old Bybloemen Tulips. However, the flowers are not as large as those of the Darwins and the plants do not grow as tall. We do not advise planting them with the self-colored varieties but if used as isolated groups in the shrubbery they will be astonishingly beautiful.

Tulipa-Tulip Species

Nowhere else is such a varied collection of Tulipas offered. Being one of the Van Tubergen specialties, the world's newest and finest in this species are listed here. We strongly recommend them to all Tulip enthusiasts for they will provide new and delightful experiences in Tulip growing.

Tulip Species or Botanical Tulips include a great number of beautiful and interesting varieties which show a bewildering variation in size, shape of flowers, structure of leaves, habitus, etc., and have only in common the fact they grow wild in some parts of the world: Asia Minor, Central Asia, Greece, and the Mediterranean region. Culture has not modified them. A number of the choicest may be planted in the rock garden between creeping plants, or in colonies in small warm nooks where the larger flowered garden Tulips would be out of place. All appreciate perfect drainage. As the leaves appear early, we advise planting as late as possible with the exception of *Tulipa Sprengeri* which must be planted immediately upon arrival. Depth to plant 4 to 8 inches. Number following name denotes height in inches.

ACUMINATA (CORNUTA), 22. The Horned Tulip. The long petals of this Tulip are curiously twisted giving it quite a fantastic appearance. The color is red and yellow and it makes an interesting cut flower. 3 \$.65, 12 \$2.15, 25 \$4.00, 100 \$14.75.

AUCHERIANA, 3. A most distinct species from the Near East. Small, expanded deep rose pink flowers. Each \$2.25.

AUSTRALIS, 6. Small yellow flower, flushed red on the outside of the petals. It somewhat resembles *T. sylvestris* although the stem is shorter and it blossoms more freely. Very sweetly scented. 3 \$.80, 12 \$2.85, 25 \$5.25, 100 \$19.50.

BATALINI, 7. The rather large flowers of this species have bluntly pointed petals of a pale yellow color verging toward salmon, an exquisite color. It is the yellow counterpart of *T. linifolia*. Fragrant. 3 \$1.20, 12 \$4.50, 25 \$8.15, 100 \$31.25.

BIFLORA, 6. This is probably the smallest Tulip known. The flowers are like tiny white stars with yellow centers and are borne 2 or 3 to a stem. Deserves a choice warm spot in the rock garden where it will blossom very early. 6 \$.55, 12 \$.90, 25 \$1.80, 100 \$6.25.

CHRYSANtha, 16. A charming sizable flower of pure yellow with a rosy flush on the outer petals. Greatly resembles *T. stellata*. Perfect drainage should be provided in a warm situation and each bulb planted in a pocket of sand. 6 \$.55, 12 \$.90, 25 \$1.80, 100 \$6.25.

CLUSIANA, 14. One of the best known Tulipas and called The Lady Tulip. The petals are white but strong wedge-shaped splashes of bright carmine on the outer petals gives a strong contrast with the white of the interior. There is a reddish purple center. Fine for cutting. Persistent grower. (See Page 15.) 3 \$.65, 12 \$2.15, 25 \$4.00, 100 \$14.75.

EICHLERI, 12. Splendid, large dazzling scarlet flowers with a center of yellow edged black. It is a most reasonable variety lasting well in the garden and thriving in sunshine. Handsome against a green background. (See Page 15.) 6 \$.80, 12 \$1.25, 25 \$2.45, 100 \$8.75.

# Narcissi-Daffodils

Truly nothing gives greater delight than to anticipate the glorious possibilities of the fat narcissus buds thrust up so bravely in early spring and then to gaze upon the radiant flowers which unfailingly thrill us with their beauty.

Whether you prefer the common English name of daffodil or the more correct botanical name of *Narcissus*, this family is the glory of the early spring garden and it would hardly seem like spring without them, "blithe and yellow as canaries." Their ease of culture, freedom from pests and prolific increase combine to make them ever more popular. The newer varieties are a revelation in size and beauty with many new shades and combinations.

In borders they are lovely carpeted with small growing plants like *Myosotis*, *Phlox divaricata*, *Iberis*, *Alyssum saxatile* and *Primroses* to name just a few. Behind them could go *Gypsophila Bristol Fairy*, *Dictamnus alba* and *Platycodons* to cover the space after they have died down. They are also excellent planted among shrubs where they may enjoy partial shade. Nearly all are lovely for pot culture to cheer dull winter days.

Unless otherwise stated all bulbs are selected 1st size double-nosed bulbs. Of all varieties, however, we can supply smaller sizes at correspondingly lower prices.

## Van Tubergen's Specially Selected Mixtures for Naturalizing

If you have an old orchard or other grassy place where the grass need not be mown before the end of June, there is a fine opportunity to naturalize Daffodils. The effect of the Daffodil blooms mingling among the grass is one that cannot well be described in words. The army of graceful flowers nodding and waving in the breeze is entrancingly beautiful; and the greater the quantity used, the more pleasure derived.

To encourage the use of Daffodils in this manner, we asked our firm to put up some special mixtures of fine quality bulbs that we could offer our customers with fullest confidence in their success. Fine also for the cutting garden.

**SPECIAL MIXTURE OF SHORT TRUMPET VARIETIES (N. Barri incomparabilis, Leidsi poetaz and poeticus).** First Size Round Bulbs 100 \$4.50, 500 \$19.00.

# Regelio-Cyclus Iris

A strain of hardy, free flowering hybrid Irises of great beauty raised by our firm from crosses between the Regelia and Onco-cyclus Irises. They are perfectly hardy and the flowers which are strikingly beautiful flower freely and are fine for cutting.

They appreciate a soil well supplied with humus such as peat moss or leaf mold and the addition of a mild fertilizer or bone meal. They need a good baking during the resting period after blooming and this may be accomplished by withholding water or by digging and storing in dry sand or peat moss until time to re-plant in October.

## Dutch, English and Spanish Iris

These Irises are exquisite in shape reminding one of butterflies and the colors are varied and beautiful. They come in tones of pale to dark blue, yellow, white, purple and two-toned effects. Some of the blue and gold ones are handsomely bronzed. They have been called "the poor man's Orchid" because of their extreme beauty, ease of culture and low price.

All three kinds are easily grown. The Spanish and Dutch varieties need only a sunny well-drained position in ordinary garden soil with a little winter protection in the colder parts of the country. The English Iris prefer a loamy soil and slightly more moisture than do the Dutch and Spanish. Like the others they require a sunny location.

Considerations of space prevent the full listing of the Dutch, English and Spanish Iris we can supply but we welcome inquiries for prices from any customer interested in the varieties named below: Dutch Iris Varieties. **D. Haring, Huchtenburg, Imperator, Poggenebeck, Rembrandt, Van Enerdingen, Wedgewood, White Excelsior and Yellow Queen.**

# The Lure of The Little

Most gardeners are familiar with such small bulbs as Crocus, Scillas, and Muscaris, but there are many delightful small-flowering bulbs which are often overlooked. The keen amateur who finds a special pleasure in the intriguing miniature blooms of many of the earlier spring flowering bulbs will find much in this catalogue to rouse his interest.

The Tulip and Crocus species are particularly rich in unusual and beautiful little garden subjects and to those who have not grown them before, there are many rare finds in store. Leucojums, Eranthis, Fall Blooming Crocus and Hyacinthus amethystinus all have their special charm.

We could apply the same description to other small bulbs, especially the dainty *Muscari latifolium*, so different from other members of its family with its two-toned bells and broad leaves. We would also commend to every gardener the whole family of *Chionodoxas* which while reasonably well-known deserve much wider recognition.

As the firm of C. G. Van Tubergen are the leading hybridists and collectors of all these treasures, the newest varieties will always be found in our catalogue.

## Chionodoxa GLORY-OF-THE-SNOW

One of the most gladdening sights in early spring is a plantation of *Chionodoxas* which produce so lavishly their starry clustered blossoms of chiefly purest blue. While not as well known as *Scillas* they are worthy rivals as beautifiers in the spring garden. They increase rapidly by seeds and offsets, are absolutely hardy and can be left undisturbed for years. They are fine for planting under the edges of shrubs, for naturalizing, for borders or for the rock garden. The bulbs must be planted immediately on receipt. Depth to plant, 3 inches and 2 or 3 inches apart.

All Bulbs Extra Size.

**GIGANTEA.** A giant form bearing blue flowers about 2 inches across on stems 5 or 6 inches in height. A choice variety. (See Page 22.) 12 \$5.00, 100 \$2.50.

**GIGANTEA ALBA.** A vigorous fine white companion to the above. 12 \$.75, 100 \$5.00.

**LUCILLIAE.** The pure sky-blue flowers with white throat are borne from 5 to 8 to a stem and make a fine display because 3 or 4 of the upright flowers are open at a time. Blooms a little later than *C. gigantea*. 25 \$.50, 100 \$1.50.

**LUCILLIAE ALBA.** A beautiful variety of frosty white. Extra fine. 12 \$.55, 100 \$3.75.

**LUCILLIAE PINK GIANT.** This is a new variety of great merit produced by Van Tubergen. Many large bright pink flowers are borne on tall stems. Highly recommended. (Ψ) Each \$.65, 12 \$7.25.

**LUCILLIAE ROSEA.** Deep pink buds opening lighter pink. A delightful variety. 12 \$.50, 100 \$3.00.

**SARDENSIS.** A very early blooming type having blossoms of true gentian blue. 25 \$.50, 100 \$1.50.

**TMOLI.** Handsome blue flowers with a white base blooming later than the other varieties. Requires a moist situation in shade. 12 \$.50, 100 \$2.50.

## Colchicum

To the casual observer these appear to be giant, long necked Crocuses but instead are members of the Lily family. However, they are in every way used the same as Crocuses. They boldly thrust their large airy heads up early in the fall and make a fine show over a period of couple of months. Like most fall-blooming Crocuses, they are accompanied by no foliage as the leaves appear in early spring and disappear by June. They are splendid around the skirts of shrubs which will hide the spaces after the leaves are gone, and certain positions in the rock garden are very suitable for them. In borders they are beautiful planted in front of Japanese Anemones and Michaelmas Daisies. They should be set shallowly in good soil where they will make a surprising increase. Curiously, Colchicums will bloom indoors whether planted or not and after blooming may be set outside without injury to the bulb.

Please order these at once for they should be planted very early, the same as Autumn-Flowering Crocuses and *Lilium candidum*.

**AGGRIPINUM.** This is a rare variety having checkered flowers. The widely opened pink flowers are attractively checkered in a deeper color. As this needs a good baking over the summer, it should be planted in a warm location. Each \$.55, 6 \$2.85.

**AUTUMNALE (MINOR).** The true variety. Soft uniform lilac. 12 \$.95, 100 \$6.90.

**AUTUMNALE ALBUM.** A desirable free-flowering white form. 12 \$1.10, 100 \$7.50.

**AUTUMNALE ALBUM PLENUM.** A rare double white form of great beauty. Each \$1.90.

**AUTUMNALE ATROPURPUREUM.** Pale purple changing to deep crimson. A very rare dwarf variety which blooms very late. (Ψ) 6 \$.85, 25 \$2.75.

**AUTUMNALE PLENUM.** An unusual double variety having rosy-lilac flowers. Late. 12 \$1.25, 100 \$8.75.

**AUTUMNALE MAJOR.** See *C. byzantinum*.

**BORNMUELLERI.** Immense flowers of clear violet with white centers. Very fine. 3 \$.70, 25 \$4.35.

**BYZANTINUM (AUTUMNALE MAJOR).** Many lilac-rose flowers. 3 \$.70, 25 \$4.35.

**CILICUM.** A rare species. Large flowers of pink with lilac checker-ing. Very free flowering. Each \$.70, 6 \$3.75.

**SPECIOSUM.** Large bowl-shaped flowers of light violet. Late. 3 \$.55, 12 \$1.80.

**SPECIOSUM ATRO-RUBENS.** Clear ruby-violet with white center. Most beautiful. 3 \$.65, 12 \$2.15.

---

The following hybrids produced by Van Tubergen are wonderful improvements on older varieties as the colors are brighter and better. They are also excellent for flowering inside as the bulbs have flat bases and also flower freely.

**SPECIOSUM CONQUEST.** A lovely dark violet. A. M. Haarlem. (Ψ) 3 \$1.15, 12 \$4.30.

**SPECIOSUM LILAC WONDER.** Outstanding pinkish lilac. Free flowering. Highly recommended. (Ψ) 3 \$.80, 12 \$2.85.

**SPECIOSUM THE GIANT.** Immense deep lilac-mauve flower with a fine white base. Late. F. C. C. Haarlem. (Ψ) 3 \$1.00, 12 \$3.60.

**SPECIOSUM WATER LILY.** Words convey inadequately the sheer beauty of this variety. Large double flowers of bright lilac resembling a water lily. F. C. C. Haarlem. (Ψ) Each \$.50.

**VERNUM (BULBOCODIUM VERNUM).** This is placed under Colchicums only for convenience because while it resembles both the Crocus and Colchicum, it is neither but the solitary member of its genus, *Bulbocodium*. It resembles a pink fall-blooming Crocus with long narrow petals but startles by sending forth flowers soon after the Snowdrops appear in the spring. Rare and unusual. (Ψ) 6 \$.70, 25 \$2.15.

## Spring-Flowering Dutch Crocus

Everyone loves Crocuses for they herald spring. No matter how cold the weather, we feel that spring has come when the first Crocus rises bravely from his winter sleep.

They are not very demanding as to culture. A loose loamy soil, well drained and not too rich, suits them splendidly; and they do best in full sun. Depth to plant about 4 inches. Lightly rooting dwarf annuals may be sown over them.

Crocuses can be grown very easily in pots and bulb pans for enjoyment indoors. After planting the pots can be sunk in the ground, covered with 3 or 4 inches of soil and left there until about the middle of November. From then on they should be kept in a cool, dark cellar and not allowed to dry out. By the middle of February, they can be brought into the living room.

All Bulbs Top Size, 10 to 11 cms. for Crocuses, unless otherwise noted. Not less than 50 sold at the 100 price.

## Autumn-Flowering Crocus Species

These Crocuses bloom in autumn extending the gardening year a month or more before King Winter finally ascends his throne. Their tender color appearing so jauntily just as other flowers are on the wane seem doubly precious. The spot where they are to bloom can be covered earlier in the season with dwarf annuals which, having passed their prime, can be removed when the Crocuses begin to bloom. A famous gardener, Mr. A. Clutton-Brock suggests mixing with them Scillas and Chionodoxas so that there may be color in the same spot both spring and fall.

Please order these at once for they must be planted very early and time must be allowed for importing. We have made arrangements for a special early shipment of these bulbs. The same applies to Colchicums and Lilium candidum.

## Spring-Flowering Crocus Species

Spring-Flowering Crocus Species open their flowers even before the large flowered Dutch varieties. They usually flower in March and April but some will rashly appear even during February should there be warm, thawing spells of weather. Thus we can easily lengthen our gardening year by planting several of these early species.

They need a well-drained position in full sun and should be planted 2 or 3 inches deep. As they increase and self-sow freely, they are splendid for naturalizing. Especially recommended for this are Susianus and Tomasinianus.

## Eranthis-Winter Aconite

Pretty little yellow flowers like buttercups, each flower surrounded by a frilly little ruff of green composed of finely cut foliage. They brave the most inclement weather to bloom early in the spring two weeks or more before the Crocuses and are lovely under shrubs and trees where they colonize rapidly by off-sets and self-sown seed. Nice with Snowdrops and *Scilla bifolia*.

They must be ordered early and planted immediately upon receipt; this applies also to Autumn Flowering Crocus. Depth to plant, about 3 inches and about 4 inches apart.

**CILICICA.** From Asia Minor. A deep yellow flower with finely cut bronzy foliage. 12 \$.50, 100 \$2.50.

**TUBERGENI GUINEA GOLD.** A superior form of *E. Tubergeni*. The large flowers are deep yellow with darker flush. The foliage is attractive with bronze tinges. Prolongs the season considerably by reason of its late flowering. Sweetly scented. 3 \$1.00, 12 \$.360, 100 \$24.50.

## Fritillarias-Crown Imperials

Crown Imperials found their way centuries ago to the gardens of that day and were eagerly welcomed because of the bright display they made in early spring. Today their stately elegance is still appreciated and gardeners everywhere love them for their brilliant crowns made up of bells, each with its drop of nectar that seems never to fall. They bloom in early April and should be planted about 6 inches deep in well-enriched soil in full sun or partial shade. They average about 4 feet in height. Plant immediately upon receipt of bulbs.

**AURORA.** Deep orange red. The variety most commonly grown. Each \$.55, 12 \$.570.

**RUBRA MAXIMA.** A lusty grower with enormous red flowers. Extra fine. Each \$.70, 12 \$.715.

## Galanthus-Snowdrops

Snowdrops belong more to Winter than to Spring for though they linger into the early weeks of Spring they are able to force their way through frozen earth and wait not upon the vernal tide. They require very little attention and can remain undisturbed for years. To get a lovely effect, they must be planted thickly. They can be grown under trees and shrubs, in woodlands as well as in borders; anywhere they can have a rather moist and cool soil. They may also be naturalized in lawns in which case the lawn should not be mown before the leaves are withered.

All Bulbs Top Size, unless otherwise noted.

**NIVALIS.** Common Snowdrop. White with touches of green. Blooms very early, often through the last snows. Increases freely and persists for many years. (See Page 22.) 6 cms. or more 12 \$.75, 100 \$5.00. 5 to 6 cms. 12 \$.55, 100 \$3.75.

**PLICATUS.** The Great Crimean Snowdrop. A rare species from Southern Russia. Large globular pure white flowers with broad plicate or "pleated" leaves. Flowers later than G. Nivalis. 3 \$.80, 12 \$.85, 25 \$5.25, 100 \$19.50.

## Hyacinthus

A race of quaint and comely creatures that are all too seldom seen in American gardens. Although they are hardy, long lived and increase freely, they somehow do not find their way from the printed page to the waiting brown earth. Let us venture to plant more of these accommodating treasures for only by close acquaintance can we appreciate their exceptional virtues. Plant 3 to 4 inches deep, 3 inches apart each way.

**AMETHYSTINUS.** The Alpine Hyacinth. The bells of this variety are a brighter blue than the name would indicate, being nearer China blue. Mr. Reginald Farrer rates it high among the loveliest bulbs and says it is "the most exquisite of all delights for early summer." Height 6 inches. May-June. 12 \$.50, 100 \$3.15.

**AMETHYSTINUS ALBUS.** A pure white companion to the above with the same welcome feature of prolonging the bulb season by late blooming. Try both of these around Azalea bushes. 12 \$.50, 100 \$3.15.

**AZUREUS (Muscaria azureum).** This is a gem for the rock garden as it is a small but perfect thing. While the bright blue flowers are only 3 or 4 inches tall, it brings us a bit of spring in mild spells during February. It should be planted in well-drained, gritty soil in full sun. 12 \$.50, 100 \$2.50.

**AZUREUM ALBUM.** A most charming pure white variety of H. azureum. Very vigorous and free flowering. 12 \$.75, 100 \$5.00.

**AZUREUM AMPHILOLIS.** Delicate pale blue, flowers later than the preceding. 12 \$.50, 100 \$3.15.

**DALMATICUS.** A rare species of bright azure blue with a rosy hue blossoming in March. Each \$.65, 3 \$1.75.

## Leucojums-Snowflakes

A very hardy family of bulbs of great interest in the spring and early summer garden. Somewhat resembling Galanthus, they are larger and more vigorous in every way. They like a situation in partial shade with soil not too rich but containing a plentiful amount of leaf mold. Depth to plant, about 2 inches and 3 inches apart. Place where they may remain undisturbed to establish a colony. Bulbs should be planted immediately upon receipt.

**AESTIVUM.** The Summer Snowflake. Pure white bell-shaped flowers with green tips borne in clusters of 2 to 6 on stems a foot tall. May. 3 \$.50, 12 \$1.60, 25 \$3.10.

**GRAVETYE GIANT.** A taller growing very robust variety with large white flowers, often 6 to 8 to a cluster, that are produced abundantly during April and May. Lovely for cutting. 3 \$.70, 12 \$.235, 25 \$4.35.

## Muscari-Grape Hyacinths

Here is a race of small bulbous plants that can be grown with ease, free from tribulation and all anxiety to please them. Any well-drained spot preferably in full sun satisfies them, and while they revel in a fairly rich soil do nicely in ordinary loam. They increase freely by seed and offsets and last indefinitely, engaging qualities in any bulb. *Muscaria botryoides*, *M. Azureum*, and *M. Armeniacum* are beautiful for growing in pots.

**ARGEI ALBUM.** A choice variety having snowy white flowers, of which there are not many in *Muscaria*. Blooms later than *Botryoides album* and remains in bloom a long time. (Ψ) 12 \$.90, 100 \$6.25.

**ARMENIACUM (Early Giant).** This is a strong grower, each bulb producing 4 to 5 spikes on 8 inch stems. The racemes are at least 2½ inches long and crowded with almost spherical bells of a rich violet blue color. It has larger flowers than *Heavenly Blue* and a strong spicy fragrance. Blooms toward the end of April. (See Page 22.) 12 \$.50, 100 \$2.50.

**AZUREUM.** See *Hyacinthus Azureus*.

**BOTRYOIDES.** This is the best-known form of *Muscaria* and has been grown since "curious" gardeners first began to collect bulbs from distant lands. Each bulb sends up two flower stalks bearing light blue flowers that smell like ripe plums. 12 \$.50, 100 \$2.50.

**BOTRYOIDES ALBUM.** A choice white kind whose bells closely set upon the flower spike like tiny seed pearls. Fine for the rock garden as it will not encroach upon its neighbors. 12 \$.75, 100 \$5.00.

**COMOSUM (Tassel Hyacinth).** The old common name serves well for this plant for the flower does look more like a tassel than a flower. The color is dark blue or purple with touches of green. A very curious plant. 12 \$.55, 100 \$3.75.

**COMOSUM MONSTROSUM.** Fine feathered plumes of violet colored filaments. Very pretty for cutting. Flowers at the end of May and lasts a long time. 6 \$.85, 25 \$2.75.

**LATIFOLIUM.** A very distinct species. Tall spikes rising from solitary leaves almost as wide as those of *Lily-of-the-Valley* bear flowers of light blue darkening toward base. Blooms about mid-April. 12 \$.55, 100 \$3.75.

**MASSYANUM.** A rare tasseltype from Asia Minor bearing rosy-pink flowers 6 to 8 inches tall. Flowers in May. Each \$2.25.

**MOSCHATUM (Minor).** The Musk Hyacinth. The feature of this species is the strong sweet scent; a few of the flowers will make the air of a whole room fragrant. The flowers open purplish blue turning to yellowish brown as they age. 8 inches. 3 \$1.20, 12 \$4.50.

**MOSCHATUM FLAVUM (Nutmeg Hyacinth).** Similar to the above except that the flowers turn to a deep yellow. Sweetly nutmeg scented. 3 \$.65, 12 \$2.15.

**MOSCHATUM MAJOR.** Same as the type except that the purple flowers turn to pale yellow. 3 \$1.00, 12 \$3.60.

**NEGLECTUM.** A handsome free-flowering sort having dark, blackish blue flowers edged with white "teeth." The spike bears 30 to 40 little bells that are pleasantly scented. Flowers toward end of April. 12 \$.55, 100 \$3.75.

**PARADOXUM.** A rare variety but a favorite among gardeners who shun the obvious. A strong 6 inch spike rises from 3 leaves carrying a flower of deepest blue elegantly lined with green. Flowers very late. 12 \$.55, 100 \$3.75.

**PINARDI.** A rare tassel Hyacinth from Cilicica. Greyish blue with light blue tips. (Ψ) 3 \$.80, 25 \$5.25.

**TUBERGENIANUM.** Charming new free flowering species, introduced by us from North Western Persia. The "Oxford and Cambridge" Muscari, when in flower the top of the spike is a bright clear blue and the lower half deep Oxford-blue. The buds are of a distinct turquoise blue shade unlike any other species. Many strong spikes, height 8 inches. Flowering in mid-April. (Ψ) 3 \$.75, 25 \$4.95, 100 \$18.75.

For late ripening species and varieties see Spring List.

## Scillas-Squills

There are several distinct types of Scillas, quite unlike each other. *Scilla sibirica* and similar varieties are the popular small blue flowers of early spring; *Scilla campanulata* and *nutans* are the "Wood Hyacinths" or "English Bluebells," somewhat like a slender Hyacinth in appearance and blooming in late May.

All are effective in the spring garden and are a delight to the eye. The flowers are either bell-shaped or starry, carried on a spike or in a raceme and the different kinds offer a long season of bloom. The taller *campanulata* and *nutans* varieties are exceptionally fine for naturalizing in shade or sun as well as for use in flower borders and under shrubs and trees. The dwarf varieties are delightful for the rock garden, for scattering about shrubs or for naturalizing in grassy places.

**AMETHYSTINA.** Clear blue flowers; a beautiful species with large spikes twice the size of those of *Scilla pratensis*. Flowers end of May. Recently introduced by us from Dalmatia. 3 \$.55, 25 \$3.40.

# Hyacinths

Hyacinths are indispensable in the early spring garden because of their clear, desirable colors and their perfect faithfulness in blossoming. Although many are used for bedding where they make fine displays, their beauty is enhanced by planting them in clumps of 5 to 10 with other flowers of contrasting forms of foliage and colors to add grace and lightness. Their delightful fragrance is not the least of their charms and is very enjoyable whether they are grown inside or out.

## Lilies

### TO A LILY

"And thou dost seem, in white array'd  
 Like many a pure and beauteous maid—  
 One more sweet thing to know!"

Goethe

Lilies have been grown through the centuries in many lands for the esthetic pleasure derived from their grace and beauty. They have been praised in song and fable and the Bible contains many illusions to them. Today they are one of the most popular bulbous plants and are being grown in ever increasing numbers.

Most of the Lilies we offer are easily grown if certain simple requirements are met. In general they like a deep rich loam with perfect drainage. If there is any question about the latter, the beds may be raised two or three inches or the bulbs placed in individual pockets of sand. To keep the hot sun from baking the soil over them, lightly rooting ground covers are essential.

Lilies mature so late in the season that delivery may be delayed until late Autumn. As late planting is preferable to spring planting for most varieties, the ground should be protected against freezing by mulching deeply with leaves or other material. A bucket of dry soil stored inside for covering them is a convenience. In no case, should the bulbs remain long unplanted.

Lilies are not seen at their best until they have become established in their permanent locations and therefore do not always do justice to themselves the first year after planting.

Full Cultural Directions are sent with each order.

Base rooting kinds are marked B, and stem rooting S with depth in inches to plant immediately following. Month of blooming is indicated.

All bulbs are strong flowering size except that a few are jumbos and the size of those are noted in centimeters.
